

# TAX MAPPING SERVICE

Tax Mapping, with over 75,000 group item and code combinations, is the core effort to produce accurate client tax billing calculation for correct tax results and reporting.

This process includes taking into account the actual services, their definitions, how they are provisioned and presented on the invoice to properly matching them up to the taxing appropriate service codes.

Precise Tax Mapping is essential for producing accurate tax returns and defending the company in audits by a State Department of Revenue or the Federal Universal Service Fund.

CSI is unique in that we tax map our client services and products for all the tax rating systems in today's marketplace including CSI's own tax rating system.
